EDUCATION

San Jose State University

Bachelor of Science in Computer Science

Expected December 2026

San Jose, CA

- **Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Software Engineering, Database Management Systems, Information Security, Advanced Programming with Python

AWARDS

- **7x Hackathon Winner, \$40,000+ in prizes:** The Executable World (1st place), Agentic Commerce on Arc, the LiveKit track at a YC hackathon, and Scoop AI x BETA, Composio, Plivo and Trae with Parallel
- **Best 2D Art Award,** Global Game Jam 2026 at SJSU (Game Development Club), for I'm Not Trash in Unity
- **Dean's Scholar,** San Jose State University, Spring 2026

EXPERIENCE

Aerendir Mobile Inc.

Software Engineer Intern

Aug 2026 to Present

Mountain View, CA

- Designed and built a new app on Aerendir's existing codebase and own it end to end, from implementation and database to deployment, safety audits and presentations to the CEO
- Analyze phone gyroscope data for motion sensor biometrics that verify identity and liveness on-device

Stackbirds

Software Engineer Intern

Feb 2026 to Mar 2026

Remote

- Took the AI workflow automation platform from beta to a production Chrome extension on a 5 to 10 person team by fixing 150 bugs across audio recording, workflow execution and browser navigation
- Cut production errors for 10+ beta users by instrumenting the platform with Datadog and Sentry and triaging their issues
- Built a Python invoice agent that extracts PDFs, matches vendors, flags prices outside 0.75x to 1.5x of each vendor's history and learns from approved invoices, with guarded LLM review

PROJECTS

SafetyLens | Python, MediaPipe, FastAPI

1st Place, The Executable World Hackathon

Sep 2026

- Detected falls in under 0.5 seconds by building the live detector, a 9-module Python package with MediaPipe pose tracking and a temporal state machine, backed by 44 unit tests
- Ran costly multimodal AI only on confirmed incidents, not every frame, by adding a pre and post event evidence buffer
- Wrote the team plan and integration contract for 3 people and merged the detector into the winning demo

Parallel | Python, React, FastAPI, PostgreSQL, Docker

Co-Founder

Nov 2025 to Mar 2026

San Jose, CA

- Reached 10+ active users and pilots including SpoonOS by co-founding an AI workspace whose shared intelligence layer uses Retrieval-Augmented Generation (RAG) and a vector database to keep context across teams
- Helped win 4 hackathons by building the React, Vite, Tailwind and Framer Motion frontend, a VS Code extension and a Pipecat voice agent on FastAPI, PostgreSQL and Docker

Agentic Commerce | TypeScript, Express, React, ethers.js

Hackathon Winner, Agentic Commerce on Arc

Dec 2025 to Jan 2026

- Cut LLM inference costs 77% versus a single provider by architecting a TypeScript routing system with classifier-based provider selection and per-request and daily spend caps
- Made onchain USDC payments replay-resistant by enforcing unique nonces and transaction hash verification with ethers.js on Arc L1 before any model runs

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, C#, C, SQL, PHP

AI and Data: RAG, Vector Databases, LLM Integration, Multi-Agent Systems, Voice Agents, Computer Vision (MediaPipe)

Frameworks: FastAPI, Flask, React, Vite, Express, Node.js, Tailwind CSS

Tools and Cloud: PostgreSQL, SQLite, Docker, AWS (S3, EC2, RDS), Git, Datadog, Sentry, Unity, Unreal Engine 5
